

EDUCATIONAL FIELD TRIP TO JALDAPARA NATIONAL PARK

The Department of Zoology organised a field trip to Jaldapara National Park for the students of 5th semester. The purpose of the visit was to enrich the students with the first-hand experience of the natural habitat of an animal, to observe and analyse the fauna in their natural home. The team left the college campus on the morning of 4th November and reached the destination at night.

They visited Jaldapara National park in the morning next day and saw a number of wild animals. They caught glimpses of one-horned rhinoceros, peacocks, peahens, deer, elephant, swans, birds and so on. The trip was a success as the students got to see most of the important animals of the national park and learned a lot about their traits from the guides assigned to each group.

A trip to the Buxa Tiger Reserve Museum and trekking to Buxa fort was also organised for the students. The Museum was full of history and had a huge collection of preserved animals. The day wrapped up after a fun trek to the historical landmark Buxa Fort. The Team returned on 6th November with great memories and enriching experience.
