Acknowledgement

First of all I would like to thank the Almighty god, for giving me the strength and will to complete this task just in time. Even though I faced lots of difficulties while trying to complete this task, I still managed to complete it.

Secondly I would like to thank Dr. Balram Upadety sir for his guidance also a great thanks to my family and friends for their constant guidance and support throughout the project.

Introduction

Knowledge about solid waste sources and types as well as information on its composition and rate of production and disposal is essential for the design and operational facets of the functional elements concomitant to solve solid waste management.

Tourism plays a substantial role in the development of a small island picnic spot or public place. Yet, it results in creation of additional wastes which have indirect and direct impacts on the somewhat unique and quite vulnerable environment resources. In light of this, an identification of the negative and positive effects of the growth of tourism industry, reducing overconsumption and the amount of waste produced has two dimensions: conserving the resources utilized by the tourist to be employed in production of different
