CONTENTS

1. Introduction to Environmental Pollution.
2. Meaning of Environmental Pollution.
3. Factors Affecting Environmental Pollution.
4. Types of Environmental Pollution.
5. Sources of Environmental Pollution.
6. Effects of Pollution on the Environment.
7. Environmental Protection and Control of Pollution.
8. Conclusion.

Introduction to Environmental Pollution

The systematic pollution of our environment is one of the biggest hazards that humanity faces today. People are becoming increasingly aware of the threat posed by pollution and governments are enacting legislations aimed at protecting the environment.

Owing the last few decades, the global environment has gone through serious challenges and changes. Population pressure has escalated rapidly consequently resources have dwindled.

Pollution is an undesirable change in the physical and biological operations of air, land and water. They may be or will be harmful to human life, species and industries process; living condition and culture assets or deteriorates our material resources.

Human being can be exposed to pollutant in many ways through the air they breathe, the water they drink, the food they eat and the cosmetics, drugs and other products they use. The continuing discovery of previously unsuspected hazards

Conclusion

On the basis of coordinating with other related planning and analyzing the current challenges in the environment, the present Environmental Planning has proposed the planning vision and objectives, together with a preliminary scheme for environmental functional districts and environmental functional district management. Under the three principal themes of "optimizing the environment suitable for living and Tourism," "promoting a conservation and Recycling oriented Society" and "Integrating into the Green and Quality Region," this planning has also established 33 green indicators for the Environmental Planning, proposed 15 areas of concern and their strategic direction, formulated various major actions and established the implementation and supervision mechanisms, in order to enhance the environmental management capability of the Macao SAR Government and guarantee the execution of the planning.

However, since the environment is a complex, variable and extensive system, protecting the environment is a hard and enduring task. It is impossible that all the existing pollution problems in the environment can completely be resolved in the next decade. A

wonderful and quality environment must be achieved by continuous planning, governmental policies efforts of the enterprises and public participation.

It is the responsibility of everyone to protect our environment. Let us fulfill our responsibilities in environmental protection; create a quality ecological environment and sharing wonderful green living together.
